## SURE WAY TO BETTER PICTURES IN BLACK & WHITE OR COLOR!

YASHICA 44 LM is the brightest idea in cameras. It uses 127 film—takes 12 pictures in black & white or color—12 sparkling slides, and here is the convenience of an accurate, sensitive, reliable exposure meter to help you get perfect exposure every time.

### EXPOSURE READING SYSTEM

Direct camera at the subject. The needle of the light reading window swings to indicate the required key number. Read the key number in the window, align the number with the dot on the outer rim of winding knob, and you can get the correct combination of lens opening and shutter speed for the particular ASA film speed setting.
